DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Observations

Claim 1 contains the term "desk-type" which is unclear.

Claim 2 contains the phrase "such as specimen containers", which is unclear as to whether the specimen containers are actually a part of the claim.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent 4,858,767 to Myers et al.

Myers et al teach a container inspection system comprising a desk like structure having two specimen processing units (15, 18), both of which include rotary conveying mechanisms, as recited in claim 1 (see figure 1). With respect to claim 2, where the rotary conveying mechanism is further defined, Myers et al teach that the rotary conveying parts are star wheels which are timed in sequence to systematically communicate with the transferring means and operate continuously. Although, not pointed out in the figure, the rotary conveying device

would inherently have a drive motor and a controller to operate the drive motor. With respect to the carry in/carry out means, Myers et al teach that the transferring means (14, 16, 20) accept containers from the conveyor and transfer them to the rotary disc (transferring means 14) or accept the containers from the rotary disc and carry them to another rotary disc (transferring means 16).

Allowable Subject Matter

2. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art of record fails to teach a specimen inspection apparatus having multiple rotary conveying means in conjunction with a master specimen carry in unit/ carry out unit, a usable region detector, a stopper remover, label issuer, pipette tip, pipette unit and slave specimen supply unit/ carry out unit.
